

Mixed Metal Kitchen Guide

Mixing metals can give a kitchen a wonderfully layered, collected vibe. The key to good execution is intention. Follow these principles to design a space you'll love.

1. Stick to two to three metals max.
2. Choose one dominant metal.
3. Think of iron as a neutral.
4. Don't be afraid to mix warm and cool.

5. Match appliances and sink faucet.
6. Don't match pendants and chandelier.
7. Coordinate choices with kitchen color scheme.
8. Distribute different finishes evenly.
